

Rosemount 5600 Series Radar Level Transmitter

- *Market leading sensitivity and unique signal processing features allow it to handle a wide range of process conditions*
- *High repeatability ensures an extremely reliable and accurate level transmitter, even in the toughest conditions*
- *Adjustable power supply, 24-240 V AC/DC, 0-60 Hz*
- *FOUNDATION™ fieldbus or analog 4-20 mA superimposed with HART®*
- *Interchangeable transmitter heads and antennas*
- *No moving parts*
- *Non-contacting radar eliminates interaction with the product*
- *Intelligent software support for easy configuration and setup*
- *Extensive selection of antennas and materials*

Legendary Rosemount Performance Customized For Your Level Process Applications

Introduction

The Rosemount 5600 Series is an intelligent non-contacting radar level transmitter. Its high performance microprocessor allows for advanced signal processing and smart echo-tracking features. Together with its high sensitivity the radar transmitter can detect and evaluate all echoes within the tank or vessel. The 5600 Series support and assist the user to a successful configuration of the transmitter in process level applications, from easy to complex process situations.

Applications

The Rosemount 5600 uses state-of-the art microwave technology to get highest reliability and precision. It measures the level of liquids, slurries, and solids. The transmitter operates in a wide range of temperatures, pressures, vapor gas mixtures, and various process conditions.

FIGURE 1. Rosemount 5600 Applications

- Applications in process vessels with agitators require a radar transmitter with the 5600's high sensitivity and advanced signal processing to separate the measuring signal from noise created by disturbances.

- Still-pipe or bridle mounting is recommended for LPG applications, where the surface is sometimes boiling, and for some extremely turbulent conditions. The pipe reduces foam and turbulence and also increases surface reflection.

- The Rod antenna is suitable for small nozzle openings on tanks with short measuring range.

- With the parabolic antenna the 5600 Series is suitable for measurement of various types of solid materials (example: cement). Since solid materials quite often generate dusty environments inside their vessels and tanks, the parabolic antenna can be equipped with a protective PTFE cover which prevents dust from sticking to the transmitting portion of the antenna.

Catalog 2008 - 2009

Rosemount 5600 Series

Interchangeable Head

A 5600 Radar Level Transmitter consists of a Transmitter Head (TH) and a tank connection including antenna. The TH and the electronics inside are interchangeable without opening the tank.

FIGURE 2. Interchangeable Transmitter Head

Antennas

Rod Antenna

- Suitable for tanks with small openings.
- Existing tank flange can be used as the tank connection.

Cone Antenna

- Suitable for free-propagation and pipe mounted installation.
- Cone extensions are available (see Figure 18 on page Level-16 and Table 13 on page Level-22).
- Optional Cone antennas with cleaning/flushing connection are available (see Figure 18 on page Level-16 and Table 14 on page Level-23).

Process Seal Antenna

- The dish of the Process Seal is made of PTFE.
- Only exposes material suitable for hygienic or corrosive applications (see Figure 16 on page Level-15 and Table 11 on page Level-21).

Parabolic Antenna

- Suitable for solid materials (example: cement)
- Withstand heavy contamination
- Can be equipped with a PTFE protective cover to reduce the effects of dusty environments

Plate Design

FIGURE 3. Plate Design

Cone and Rod antennas, except the Cone with Flushing Connection, are designed with a protective plate as shown in FIGURE 3.. The plate and antenna (stainless steel or optional material) together with the tank seal and o-rings (PTFE or Quartz) are the wetted parts exposed to the tank atmosphere. This allows the use of an existing flange, or a lower cost flange alternative. Loose flanges are available (Table 18 on page Level-25).

Rosemount 2210 Display Unit

The Rosemount 2210 offers basic configuration using the 4 software keys on the display itself. Data presentation on the LCD can be customized and allows many viewing alternatives. The 2210 is also used if temperature sensors are to be connected to the 5600 Series. See Table 8 on page Level-18 for available versions.

Electrical Connections

The transmitter has a power supply with an ultra-wide input range from 24 to 240 V AC or DC, 0-60 Hz.

The Transmitter Head has two separate junction boxes. One is for a non-intrinsically safe primary signal output and power supply cables. The other is normally used for intrinsically safe (IS) HART/analog outputs or optionally for a non-IS secondary analog output.

Primary Outputs can be HART or FOUNDATION fieldbus, either IS or Non-IS. The HART and secondary analog outputs can be either active or passive depending on required options.

Mechanical Mounting

The 5600 radar transmitter is easily carried to the tank top and mounted on a suitable nozzle or pipe. The radar transmitter should be installed as follows:

- Antenna oriented perpendicular to a horizontal surface.
- The transmitter should be mounted with as few fittings as possible within the beam angle.
- Filling inlets creating turbulence should preferably be kept at a distance.
- Choose as large antenna diameter as possible. A larger diameter concentrates the radar beam and ensures maximum antenna gain. Increased antenna gain offers greater reflection of weak surface echoes.

FIGURE 4. Rosemount 5600 Beamwidth

TABLE 1. Rosemount 5600 Beam Diameter and Angle

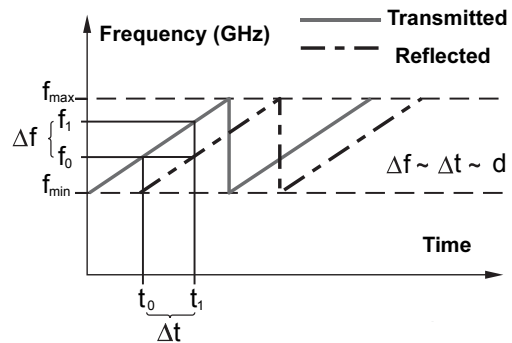

Antenna Type & Beam Angle	Distance, ft (m)			
	16 (5)	33 (10)	49 (15)	66 (20)
	Beam Diameter, ft (m)			
Cone 3 in 25°	7.2 (2.2)	14 (4.4)	22 (6.7)	29 (8.9)
Rod/Cone 4 in/ Process Seal 4 inch 21°	6.2 (1.9)	12 (3.7)	18 (5.6)	24 (7.4)
Cone 6 in/ Process Seal 6 inch 18°	5.2 (1.6)	10 (3.1)	15 (4.7)	21 (6.3)
Cone 8 inch 15°	4.3 (1.3)	8.5 (2.6)	13 (3.9)	17 (5.3)
Parabolic 10°	3.0 (0.9)	5.6 (1.7)	8.5 (2.6)	11 (3.5)

Measurement Principle

The level of the product in the tank is measured by radar signals transmitted from the antenna at the tank top. After the radar signal is reflected by the product surface the echo is picked up by the antenna. As the signal is varying in frequency the echo has a slightly different frequency compared to the signal transmitted at that moment. The difference in frequency is proportional to the distance to the product surface, and can be accurately calculated. This method is called FMCW (Frequency Modulated Continuous Wave) and is used in all high performance radar transmitters.

FIGURE 6. Frequency Modulated Continuous Wave

The FMCW method is based on a radar sweep with continuous changes in frequency.

Catalog 2008 - 2009

Rosemount 5600 Series

Measuring Range

The diagrams below show how the measuring range is influenced by the antenna type, dielectric constant of the liquid (ϵ_r) and the process conditions. For optimum performance the maximum measuring distance should be kept within the range indicated with darker color in the diagrams. Values are valid for free propagation measurement without still-pipes (bridles).

For liquids with ϵ_r that are smaller than 1.8 such as liquefied gases, an 8 inch or bigger diameter antenna is recommended if measurement is done with free propagation. In this case the measuring range in calm surface tanks is 50 ft (15 m).

To increase the measuring range further in turbulent tanks, a still-pipe can be used. For still-pipe mounted 5600 transmitters the typical measuring range is 115-160 ft (35-50 m) in turbulent tanks with liquids having ϵ_r less than 1.8.

The 5600 transmitter installed in a pipe can measure products with a dielectric ≥ 1.4 .

TABLE 2. Categories of liquids

a	Oil, gasoline and other hydrocarbons, petrochemicals (dielectric constant, $\epsilon_r=1.9-4.0$)
b	Alcohols, concentrated acids, organic solvents, oil/water mixtures and acetone ($\epsilon_r=4.0-10$)
c	Conductive liquids, e.g. water based solutions, dilute acids and alkalis ($\epsilon_r > 10$)

FIGURE 7. Applications with calm product surface⁽¹⁾

FIGURE 8. Applications where the product is gently stirred, causing minor turbulence⁽¹⁾

FIGURE 9. Applications with turbulent product surface conditions⁽¹⁾

(1) Measuring range in ft (m).

System Integration

Level values are transmitted from the transmitter as analog 4-20 mA signals superimposed with HART or FOUNDATION™ fieldbus. The analog outputs are either passive for connection to powered cables or active providing signal power for 4-20 mA. Analog outputs can also be specified as intrinsically safe or non-intrinsically safe.

Basic configuration and setup can be done on a HART communicator, via the 2210 Display Unit, AMS, DeltaV, or any other FOUNDATION fieldbus/HART host applications (control systems).

Rosemount Radar Master is a PC based software package which allows for full configuration, including advanced features such as Spectra plots, offline/online configuration capabilities, logging, extensive online help, etcetera. To communicate with the device using Radar Master either a HART or Modbus Modem (RS485 Sensor Bus Port) is required for the PC. For fieldbus devices Radar Master can only be connected to the Sensor Bus Port (see list of Modems on page Level-25).

The Rosemount 5600 is a core component of the PlantWeb digital plant architecture.

Specifications

GENERAL

Product Designation

5600 Series Radar Level Transmitter

Operating Principle

10GHz FMCW radar

Beam Angle

See Figure 2-12. and Table 2-3 on page 2-9

Microwave Output Power

Max 1.0 mW

Internal Calibration

Internal digital reference for automatic compensation of radar sweep

Signal Processing

Powerful and advanced digital signal processing using FFT and advanced echo handling software

MEASURING PERFORMANCE

Instrument Accuracy (Under reference conditions)

±0.2 in. (±5 mm)

Reference Conditions

Metal plate with no disturbing objects

Temperature: 68 °F (20 °C).

Pressure: 14 - 15 psi (960 - 1060 mbar).

Humidity: 25 - 75% RH.

Reference Measuring Range: 1.64 - 98 ft. (0.5 - 30 m)

Resolution

0.04 in (1 mm)

Temperature Stability

±500 ppm of measured distance within the ambient temperature range

Repeatability

±0.04 in (±1 mm)

Measuring Range

0-164 ft. (0-50 m) Standard

0 - 324 ft. (0 - 99 m) Optional, requires special configuration

Update Time

100 ms

Processors

32-bit Floating DSP

CONFIGURATION

HART Device

Configure the device using Rosemount Radar Master, a powerful and interactive Windows-based configuration tool, which is enclosed with each order. A HART Modem is required for the PC to communicate with the device.

Recommended PC Hardware Specification: ≥ 1 GHz processor, ≥ 128 MbRam, and Operating System of Windows 2000, XP, or NT.

Alternative Configuration Tools:

Emerson Process Management 375 Field Communicator, Emerson Process Management AMS software, or many of the other HART hosts that supports DD technology.

FOUNDATION™ fieldbus Device

Configuration of a fieldbus device can be done via DeltaV, or the 375 Field Communicator, or by hosts that support FOUNDATION™ fieldbus and DD technology.

Radar Master may also be used for 5600 fieldbus devices, but only using the Sensor Bus Port connection. See below.

Sensor Bus Port

Configuration is also available with Radar Master via the 5600 device Sensor Bus Port Connection. This port is available for both HART and Fieldbus devices. Connect the PC directly to the transmitter using a RS485 (Modbus) modem.

Note that this connection is only allowed in a Non-Explosive environment. See Figure 11 on page Level-6. A proven RS485 Modem and the part number is listed in Table 17 on page Level-25.

DISPLAY

Display (factory mounted on transmitter)

Protection class IP67

With weather/dirt protection cover; graphical LCD display 128 by 64 pixels with 4 control soft-keys and 7 text lines with 16 characters/line for display and configuration.

Display (remote mounted)

Same as above, mounted in separate enclosure, protection class IP67; max cable length, display - radar transmitter: 330 ft. (100 m); cable type: 4 wire shielded instrument cable, min. 0.5 mm², (AWG 20).

Display with Temperature Inputs (remote mounted)

Same as above, mounted in separate enclosure, protection class IP67; max cable length, display - radar transmitter: 330 ft (100 m); cable type: 4 wire shielded instrument cable, min. 0.5 mm², (AWG 20); temperature measurement 1-3 spot elements PT100 or CU100, or 6 spot elements with common return.

ELECTRICAL

Power Supply

Ultra wide power supply 24-240 V AC or DC 0-60 Hz

NOTE

Minimum power required at transmitter power terminals is 20 V

Power Consumption

Maximum 10 W, Nominal 5 W

Transmitter Cable Entries

3 × 1/2 inch NPT; for cable glands or conduit entries

Optional: 1/2 inch NPT Cable Gland Kit

Optional: 1/2 inch NPT/ M20 Adapters (Set of 3)

Remote 2210 Display Unit Cable Entries

2x M20 Entries

1x M25 Entry

Output Cabling

Twisted and shielded pair; min. 0.5 mm² (AWG 20)

Outputs

Primary Output:

Alternative 1: HART[®] + 4-20 mA current loop
(non-IS or IS option)

Alternative 2: FOUNDATION[™] fieldbus (non-IS or IS option)

Secondary Outputs:

Analog 4-20 mA current loop (Optional)

Analog Output Characteristics

Type

Analog 4-20 mA Current Loop, active (with power supplied by the 5600) or passive (for loop-supplied power)

Galvanic Isolation

> 1500 V RMS or DC

Analog Output Characteristics

See Product Certifications on page Level-11

Alarm Level

Standard: Low=3.8 mA, High=22 mA or freeze,

NAMUR NE43: High=22.50 mA,

Rosemount: Low=3.75 mA

Accuracy

±300 µA at 4 mA

±600 µA at 20mA

Resolution

0.5µA (0.003%)

Linearity

±0.01%

Temperature Drift

± 28 ppm/°F (±50 ppm/°C)

Output Impedance

>10 MΩ

Voltage Compliance

7-30 V (passive output)

External Loop Resistance

<700 Ω (passive output with 24 V external supply)

<300 Ω (active output)

Fieldbus Output Characteristics

Fieldbus Voltage limits: 9 to 32 V

Current Draw: 12.5 mA

For I.S. Applications:

U_i = 30 V

I_i = 300 mA

P_i = 1.3 W

C_i = 0

L_i = 0

Lift-off Minimum Voltage

9.0 V

SAFETY NOTE AND SPECIAL CONDITIONS FOR SAFE USE (X-MARKINGS IN ATEX, AND IEC EX CERTIFICATES)

As light alloys may be used as the enclosure (or other parts) they may be at the accessible surface of this equipment, in the event of rare incidents, ignitions sources due to impact and friction sparks could occur. This shall be considered when the equipment is being installed in locations that specifically require Group II, Category 1G equipment.

Under certain extreme circumstances, the non-metallic parts of the equipment may be capable of generating an ignition-capable level or electrostatic charge. Therefore, when used for applications that specifically require Group II, Category 1 equipment, the equipment shall not be installed in a location where the external conditions are conducive to the build-up of electrostatic charge on such surfaces. Additionally, the equipment non-metallic parts shall only be cleaned with a damp cloth

Approved Manufacturing Locations

Rosemount Tank Radar AB – Gothenburg, Sweden

European Union Directive Information

The EC declaration of conformity for all applicable European directives for this product can be found on the Rosemount website at www.rosemount.com. A hard copy may be obtained by contacting our local sales representative.

ATEX Directive (94/9/EC)

Rosemount Inc. complies with the ATEX Directive.

Ordinary Location Certification for Factory Mutual

As standard, the transmitter has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM, a nationally recognized testing laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

5600 Series Radar Level Transmitter European ATEX Directive Information

This document lists specific requirements which have to be fulfilled to secure a safe installation and use of 5600 Series Radar Level Transmitter in a hazardous area. Omission may jeopardize safety, and Rosemount will not take any responsibility if requirements as listed below are not fulfilled.

Canadian Registration Number (CRN)

The product design of the Cone Antenna has been accepted and registered for use in Canada.
CRN: 0F1015.9C

 Minimum / maximum flange temperature rating depends on O-ring selection (See Table 6 and page 14).

FIGURE 13. Cone Dimensions

- ① 145 psig at 212°F / 10 bar at 100°C
- ② 73 psig at 392°F / 5 bar at 200°C
- ③ -15 psig at 392°F / -1.0 bar at 200°C
- ④ 798 psig at 752°F / 55 bar at 400°C

Note: Pressure rating may be lower depending on flange selection.

Minimum / maximum flange temperature rating depends on O-ring selection (See Table 6 and FIGURE 14.).

TABLE 6. Flange Temperature Range depending on O-ring selection

O-ring Material	Minimum Temperature °F (°C) in air	Maximum Temperature F (°C) in air
Viton®	5 (-15)	392 (200)
Fluoroelastomer		
Ethylene Propylene (EPDM)	-40 (-40)	266 (130)
Kalrez® 6375	-4 (-20)	527 (275)
Buna-N	-31 (-35)	230 (110)

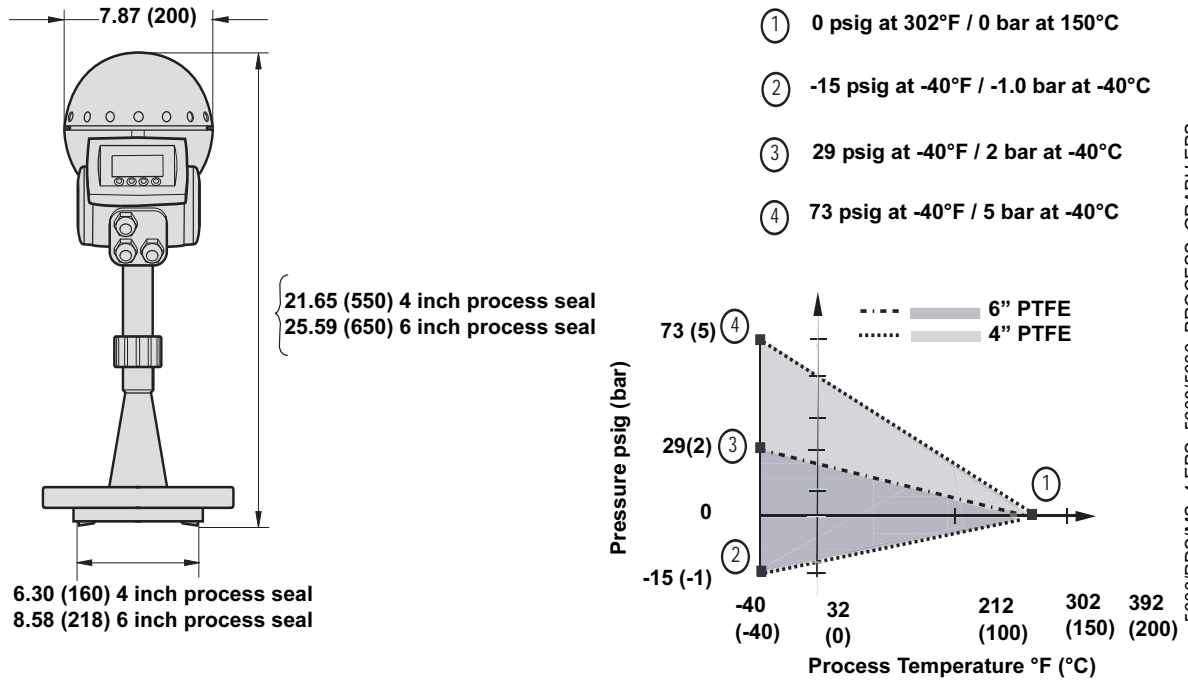

FIGURE 14. Temperature Rating Considerations

Note
Flange temperature depends on mounting conditions, such as nozzle position, distance to max product level, nozzle height, presence of insulation, etc.

FIGURE 15.

FIGURE 16. Process Seal Antenna Dimensions

Note
 Dimensions are in inches (millimeters)

TABLE 7. Dimensions for Stainless Steel Flange and Galvanized Carbon Steel Dimensions are in inches (millimeters)

Flange	Di	D	Dh	Ds	F
ANSI 4 inch Class 150	3.78 (96)	9.02 (229)	7.52 (191)	0.87 (22)	0.87 (22)
ANSI 6 inch Class 150	4.94 (125.5)	10.98 (279)	9.49 (241)	0.87 (22)	0.87 (22)
DN100 PN16	3.78 (96)	8.66 (220)	7.09 (180)	0.71 (18)	0.87 (22)
DN150 PN16	4.94 (125.5)	11.22 (285)	9.45 (240)	0.87 (22)	0.87 (22)

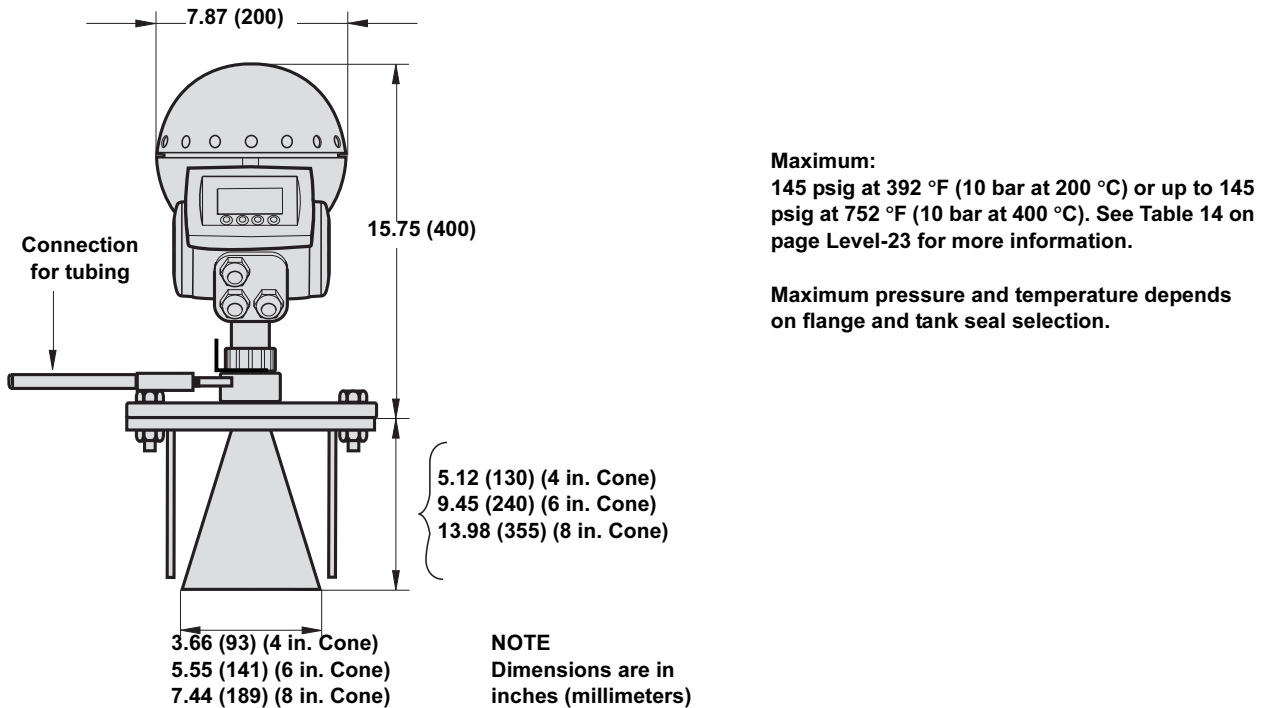

5600_D.D._9150070836AA

FIGURE 17. Extended Cone Antenna Dimensions

Note: Pressure rating may be lower depending on flange selection.
 Minimum / maximum flange temperature rating depends on O-ring selection (See Table 6 and page 14).

FIGURE 18. Cone Antenna with Integrated Flushing Connection Dimensions

Note: Pressure rating may be lower depending on flange selection.
 Minimum / maximum flange temperature rating depends on O-ring selection (See Table 6 and page 14).

FIGURE 19. Parabolic Antenna Dimensions

Ordering Information

TABLE 8. Rosemount 5600 Radar Transmitter Selection

Model	Product Description
5601	Radar Level Transmitter for Process Applications
Code	Frequency Band
U	US Market Only (10 GHz)
S	Switzerland Market Only (10 GHz)
A	All Other Markets (10 GHz)
Code	Product Certification
NA	None
E1	CENELEC/ATEX Flameproof
E5	FM Explosion-proof
E6	CSA Explosion-proof
E7	IECEX Flameproof
Code	Power Supply
P	24-240 V DC/AC 0-60 Hz
Code	Primary Output
5A	4-20 mA with HART communication, Passive Output
5B	4-20 mA with HART communication, Passive Output, Intrinsically Safe Circuit ⁽¹⁾
5C	4-20 mA with HART communication, Active Output
5D	4-20 mA with HART communication, Active Output, Intrinsically Safe Circuit ⁽¹⁾
7A	FOUNDATION Fieldbus
7B	FOUNDATION Fieldbus, Intrinsically Safe Circuit ⁽¹⁾
8A	RS 485 Protocol - Modbus
Code	Secondary Output ⁽²⁾⁽³⁾
0	None
1 ⁽⁴⁾	4-20 mA, Passive Output ⁽⁵⁾
2 ⁽⁴⁾	4-20 mA, Passive Output, Intrinsically Safe Circuit ⁽¹⁾
3	4-20 mA, Active Output ⁽⁵⁾
4	4-20 mA, Active Output, Intrinsically Safe Circuit ⁽¹⁾
Code	Display Unit
N	None
P	LOI, Factory mounted on transmitter
R	LOI, Remote mounted
T	LOI, Remote mounted with temp inputs (1-6 spot elements with common returns)
Code	Volume Calculation
E	Basic Volume Equations (Standard)
V	Strapping Table, up to 100 points
Typical Model Number: 5601 S E1 P 5A 0 P E Antenna Selection ⁽⁶⁾	

(1) Intrinsically safe circuit only applicable if product certificate codes E1, E5, E6, or E7 is selected.

(2) Secondary output codes are not available in a combination of E6 CSA and Primary Output codes 5A, 5B, 5C, or 5D.

(3) Secondary output codes 1, 2, 3, and 4 require an isolator when used in combination with 7A, 7B, or 8A.

(4) Not available in combination with Primary Output codes 5A, 5B, 5C, or 5D.

(5) Not allowed in combination with Display Unit codes P, R, or T.

(6) Select the antenna type and options using Table 9, Table 10, Table 11, Table 13, and Table 14.

TABLE 9. Rod Antenna

Code	Antenna Type	Antenna Size	Antenna Material	Note
Rod

Conduit Adapters	
G1	1/2 inch NPT Cable Gland Kit
G2	1/2 inch NPT/ M20 Adapters (Set of 3)
Conduit Electrical Connector⁽¹⁾	
GE	M12, 4-pin, Male Connector (eurofast®)
GM	A size Mini, 4-pin, Male Connector (minifast®)
Protective Cover	
PB ⁽²⁾	PTFE Protective Cover (PTFE Bag)
Special Procedures	
P1 ⁽³⁾	Hydrostatic Testing
U1 ⁽⁴⁾	TÜV Overfill Protection

(1) Not available with certain hazardous location certifications. Contact an Emerson Process Management Representative for details.

(2) For Parabolic Antenna only. Not suitable for hazardous applications.

(3) Not available in combination with Parabolic Antenna option codes.

(4) Requires Secondary Output Code 3 or 4 (Active Output).

TABLE 16. Typical Model Code Examples

5601 A E1 P 5A 0 P E 24S P V NR

ATEX approval, passive HART primary output and display mounted on transmitter. Basic Volume calculation. Antenna is a 4 inch Cone, SST with PTFE Seal and Viton® Fluoroelastomer O-rings. No options.

5601 U E5 P 7A 2 T V 94S P K CL C1

FM approval, FOUNDATION™ fieldbus output and remote mounted display with temp inputs and a secondary 4-20mA passive IS output. Volume table with up to 100 points. 4 inch Cone Antenna with integrated cleaning, PTFE seal and kalrez® o-rings for high temperature and pressure. Flange is ANSI 4 inch Class 150 stainless steel. Custom configuration selected.

Accessories

TABLE 17. Accessories Part Numbers

Part Number	Description	Note
Modems		
03300-7004-0001	HART Modem and cables	Viator by MACTek®
03300-7004-0002	HART USB Modem and cables	Viator by MACTek®
05600-5004-0001	K2 RS485 Modbus Modem	For Sensor Bus Port connection (requires PC with 9-pin Serial port)
Antenna Accessories		
05600-5001-0001	PTFE Protective Cover (PTFE Bag)	For Parabolic Antenna only. Not suitable for hazardous applications.
