Content

The Rosemount 148 Temperature Transmitter

The Rosemount 148 is a low cost temperature transmitter used with multiple sensor type inputs in monitoring applications. The Rosemount 148 saves money in cabling and installation costs over wiring directly and delivers superior measurement accuracy and reliability.

INSTALLATION READY SOLUTIONS

The Rosemount 148 is part of the Complete Point Solutions (CPS) program. CPS guarantees that the transmitter, housing, sensor, extension, and thermowell can be shipped from the factory as an installation-ready assembly.

INCREASED PERFORMANCE

The Rosemount 148 offers better measurement accuracy and improved reliability over wiring a temperature sensor directly back to the DCS.

FLEXIBILITY

The Rosemount 148 is compatible with 2-, 3-, and 4-wire nickel and platinum RTDs, a variety of thermocouple sensors, and ohm inputs.

LOW INSTALLED COST

The Rosemount 148 reduces overall installation costs when compared to wiring sensors direct. In addition, the 148 can eliminate the use of expensive extension wires and multiplexers.

PROGRAMMABLE

The Rosemount 148 PC Programmer interface consists of a programmer, cables, and configuration software. The configuration software, when used in conjunction with the interface, provides the tools necessary to select the sensor type, sensor range, and sensor error action in addition to many other options.

(9) Fixed accuracy for NIST Type B is ±5.4 °F (±3.0 °C) from 212 to 572 °F (100 to 300 °C).

(10) Fixed accuracy for NIST Type K is ±1.3 °F (±0.7 °C) from -292 to -130 °F (-130 to -90 °C).

Transmitter Accuracy Example

When using a Pt 100 (a = 0.00385) sensor input with a 0 to 100 °C span, use the greater of the two calculated values. In this case the accuracy would be +/-0.3 °C.

Transmitter Temperature Effects Example

Transmitters can be installed in locations where the ambient temperature is between –40 and 85 °C (–40 and 185 °F). In order to maintain excellent accuracy performance, each transmitter is individually characterized over this ambient temperature range at the factory.

When using a Pt 100 (a = 0.00385) sensor input with a 0–100 °C span at 30 °C ambient temperature:

- Temperature Effects: 0.009 °C x (30 - 20) = 0.09 °C

Total Transmitter Error

Worst Case Transmitter Error: Accuracy + Temperature Effects = 0.2 °C + 0.06 °C = 0.26 °C

Total Probable Transmitter Error: $\sqrt{0.3^2 + 0.09^2} = 0.31°C$
